Title: Persistent Homology in ℓ_∞ Metric
Authors: [Gabriele Beltramo](#), [Primoz Skraba](#)
Comments: 28 pages, 13 figures
Subjects: Computational Geometry (cs.CG); Algebraic Topology (math.AT)

Proximity complexes and filtrations are a central construction in topological data analysis. Built using distance functions or more generally metrics, they are often used to infer connectivity information from point clouds. We investigate proximity complexes and filtrations built over the Chebyshev metric, also known as the maximum metric or ℓ_∞ metric, rather than the classical Euclidean metric. Somewhat surprisingly, the ℓ_∞ case has not been investigated thoroughly. Our motivation lies in that this metric has the far simpler numerical tests which can lead to computational speedups for high-dimensional data analysis. In this paper, we examine a number of classical complexes under this metric, including the Čech, Vietoris-Rips, and Alpha complexes. We also introduce two new complexes which we call the Alpha clique and Minibox complexes. We provide results on topological properties of these, as well as computational experiments which show that these can often be used to reduce the number of high-dimensional simplices included in Čech filtrations and so speed up the computation of persistent homology.

Replacements for Thu, 6 Aug 20

[2] [arXiv:1704.01683](#) (replaced) [[pdf](#), [other](#)]
Title: Representability theorem in derived analytic geometry
Authors: [Mauro Porta](#), [Tony Yue Yu](#)
Comments: 85 pages. This version is a minor revision
Subjects: Algebraic Geometry (math.AG); Algebraic Topology (math.AT); Complex Variables (math.CV)

[3] [arXiv:1712.06847](#) (replaced) [[pdf](#), [ps](#), [other](#)]
Title: Persistence-like distance on Tamarkin's category and symplectic displacement energy
Authors: [Tomohiro Asano](#), [Yuichi Ike](#)
Comments: 27 pages, 2 figures, v3: final version, v2: revised
Journal-ref: J. Symp. Geom. 18:3 (2020) 613-649
Subjects: Symplectic Geometry (math.SG); Algebraic Topology (math.AT)
